Similarities between Pulsating theory and Universe creation theory of *Srimadbhagawata Gita*

*‘Govinda Govinda Govinda Govinda
Govinda Rama Murari
Ananta Koti Brahmandar Hari Adhikari.’*

(The great saint Madhavadeva)

(Govinda, Rama, Murari, Hari are God’s names; Ananta means infinite, Koti means crore, Brahmanda means stars, Adhikari means the owner)

This prayer of Assamese language is not only important from the point of religious faith but also from the point of science. Because, here it is explained that Govinda, Rama, Hari or Murari or the God is the owner of infinite numbers of stars or planets of the universe. According to the modern science, the stars or planets of the universe are infinite in numbers. In same way Srimadbhagawata also says, planets or stars are infinite in the universe. ‘Brahmanda’ means the star or planet. ‘Brahma’ means the creator and ‘Anda’ means egg shaped creation. So Brahmanda means the round planets or the stars. In the medieval period the European countries were confused regarding the shape of the Earth whether it is round or flat. But according to Indian traditional knowledge, all the planets are round. So, in Indian intellectual society, there was no debate on the topic on the shape of the Earth. According to the Indian philosophy the Earth is also a round shaped planet. Srimadbhagawata agreed that God is the owner of infinite numbers of planets of the universe. Now the question arises, how this infinite numbers of stars or planets are created? As per the Big bang and Black hole theory or pulsating theory, there are some black holes in the universe. These are so dense with high gravitational force that they can even attract the light, due to which light cannot

come out or reflect from this and so, no one can even see them. Thousands of planets can be grabbed by such black holes. But once, this black hole is filled with matters and get blast, thousands of stars are created and disseminate in the universe. Again after a long period of time they lost their energies and again come to the black hole. These process continues like pulse activities of a heart. In the heart the blood gets purified. As if the planets also get purified in the black hole and come out again for a new life. In Srimadbhagawata the universe is created in the body of Brahma. Brahma is not God but he assigned to create planets by the God. Brahma lives for long hundred years. But the time of Brahma and human being is not equal. According to Gita one thousand chaturyuga of human being is equal to one day of Brahma. One chaturyuga means one round of 'Satya', 'Treta', 'Dwapar', 'Kali Yuga'. Such one thousand chaturyuga is equal to one day of Brahma. The characteristic of Satya Yuga is truthfulness, knowledge and honesty. It continues for 1728000 years. Sins are seen in the Treta Yuga for the first time. Treta Yuga continues for 1296000 years. In Dwapar Yuga sins are increased in human society and it continues for 864000 years. The last Yuga is Kali Yuga. Kali Yuga is full of sins. It continues for 432000 years. The present time is Kali Yuga. As per Gita 5000 years of Kali Yuga is already passed. At the last of Kali Yuga God incarnates as 'Kalki' and kills all the sinners and make the Earth pure and again Satya Yuga is established. In this way new chaturyuga is started. Such type of one thousand chaturyuga is one day of Brahma. The age of Brahma is hundred years which is equal to 311000040000000 years as per the time on Earth. This time is almost equal to the time calculated by modern scientists regarding creation of universe which establish the Pulsating theory also.
