

Editorial**GREEN RESEARCH METHODOLOGY,
GREEN POLICY AND DREAM OF ENVIRONMENTAL UNIVERSITY.**

The green research methods are those methods applied in research which are followed from the view point of Ecological or Environmental preservation and protection. Not only in science, the arts, commerce, technology or any other branches of the universe of knowledge are now interested in green research methods. Environmental criticism or Eco-criticism is a growing subject in the field of social science research at present day context. Based on the findings of this green research, the green policies are coined. Green policies of the governments can lead the country towards sustainable development and gross happiness or peace. It also gather strength to face natural disasters. So green research method is important for the society not only to unearthing knowledge but also to lead over all upliftment.

To carry such green researches, we must have supporting institutions like Environmental Universities. Till now no such Environmental Universities are established and still it is a dream for the environment research activists. Aranya Suraksha Samiti has submitted a memorandum to the president of India on last 30th July 2011, to establish Environmental University in Assam. Assam is famous for its rich Bio-diversity, cultural-diversity, Heritage and natural resources. The Brahmaputra river system of Assam is the largest river system in the world. Assam forest supports rare animals like rhinoceros, tiger, elephant, dears etc; Pelican, florican, stork, whistling birds etc; Python, cobra, crocodile etc; Fishes like clarius, mahseer etc; The rich and glorious ecology of Assam deserve such an institution like Environmental University. The local people of Orang Mouza of Udalguri District. of Assam has come forward to provide thousands of Bighas of land of their public use to this proposed Environmental University. The copies of the demand-memorandum is hand overed to the chief minister of Assam, BTAD chief, chairman of UGC etc. Hope, this green proposal will get positive response from the government of India as well as from Assam & BTAD administration which will create the environment of green research worldwide to save our mother earth and Bio-civilization.
